

WEEE Regulations and Compliance Statement

The Waste Electrical and Electronic Equipment (WEEE) Regulations came into force in January 2007.

Any business that manufactures, imports or re-brands electrical or electronic equipment will now pick up the costs of collection, treatment and recycling products they place on the market, including distance sellers.

The new Regulations require producers to:

- Identify volume and weight of all products they place on the market
- Register their obligations with the relevant authorities via a compliance scheme by 15th March 2007
- Take back equipment from business users as defined in the regulations
- Pay for transport, treatment, recycling and recovery costs
- Only use authorised treatment facilities that have all the relevant permits
- Meet recycling and recovery targets for their product range
- Prove to the relevant authority that they have met their obligations
- Provide product information and mark their products showing that they will not be disposed of but recycled
- Declare their registration number to distributors before they can sell

For Spurlite Ltd the above legislation means we are legally responsible for ensuring certain lighting equipment sold into the EU will be disposed of correctly at the end of its serviceable life.

To fulfill our obligations, we have appointed a registered company, Electrolink, who have established cost effective, efficient and sustainable collection and recycling processes, which are in line with WEEE regulations.

The scheme allows producers to make financial arrangements to cover the cost of recovery of WEEE either through imposing a levy up-front or charging the actual cost at the time of recovery. Spurlite Ltd have made the decision not to add a WEEE levy to invoices for goods purchased but rather will provide a quotation for WEEE recovery at the time such recovery is requested.
